

FINGERPRINTING METHOD FOR ENROLLMENT, AUTHENTICATION AND UPDATES

ABSTRACT:

[0026]

The invention relates a method of increasing the trust level associated with using fingerprint readers for the enrollment and authentication of an individual's fingerprints. This process requires the inspection of an individual's hand, fingers and fingertips by an agent prior to a fingerprint scan. On passing the inspection, the agent will then scan the individual's fingertips with a fingerprint scanner. Upon verification of an individual's identity using the individual's fingerprints then access to facilities, information and other things can be granted. Additionally, passwords or Personnel Identification Number (PIN) of the individual can be updated or changed.
